UNOPS

ABOUT ONEIMPACT

OneImpact is an innovative community engagement approach and a process through which people affected by TB are empowered to meaningfully engage and be part of the TB response to ensure that quality TB care and services are available, accessible, acceptable to all, and free from stigma and discrimination. The approach relies on 4 building blocks; (1) people for engagement and action, (2) processes to standardize approaches and learning, (3) technology to maximize reach and for CLM institutionalization and (4) actionable data to overcome barriers to access and to meet TB program targets..

PHASES OF IMPLEMENTATION

Orientation

This involves orientating all key stakeholders , including NTP managers on the OneImpact CLM approach, processes and digital platform to build a common understanding of OneImpact CLM in TB and for buy-in and uptake.

OneImpact Adaptation

This involves adapting the approach and platform for a highly contextual approach to CLM in each country.

Operations

This involves operationalizing the approach, and implementing activities such as community mobilization and empowerment, trainings at all levels, CLM oversight and improvements, CLM data analysis, dissemination, use for evidence-based advocacy and decision making .

Scale Up

This involves active dissemination and promotion and the systematic use of CLM data in the TB response.

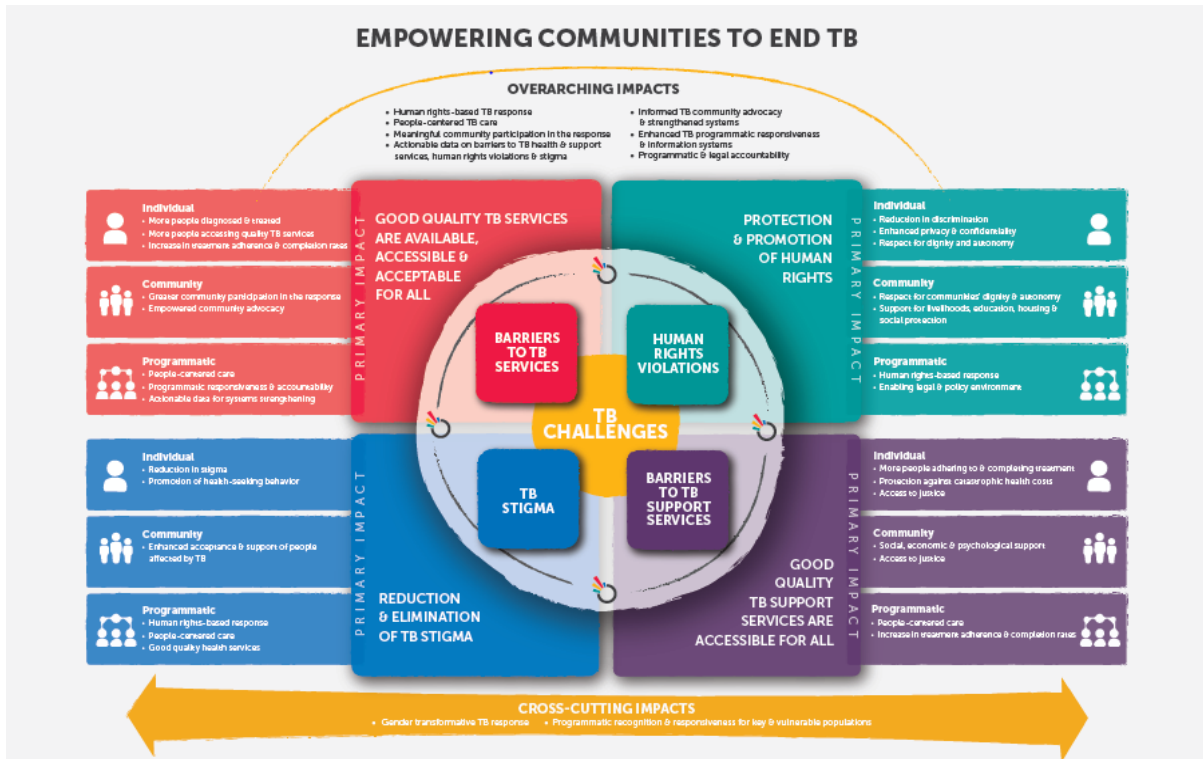

M&E

This involves monitoring progress and evaluating key inputs, processes and outputs of the CLM intervention, consolidating learnings, and developing case studies and best practices.

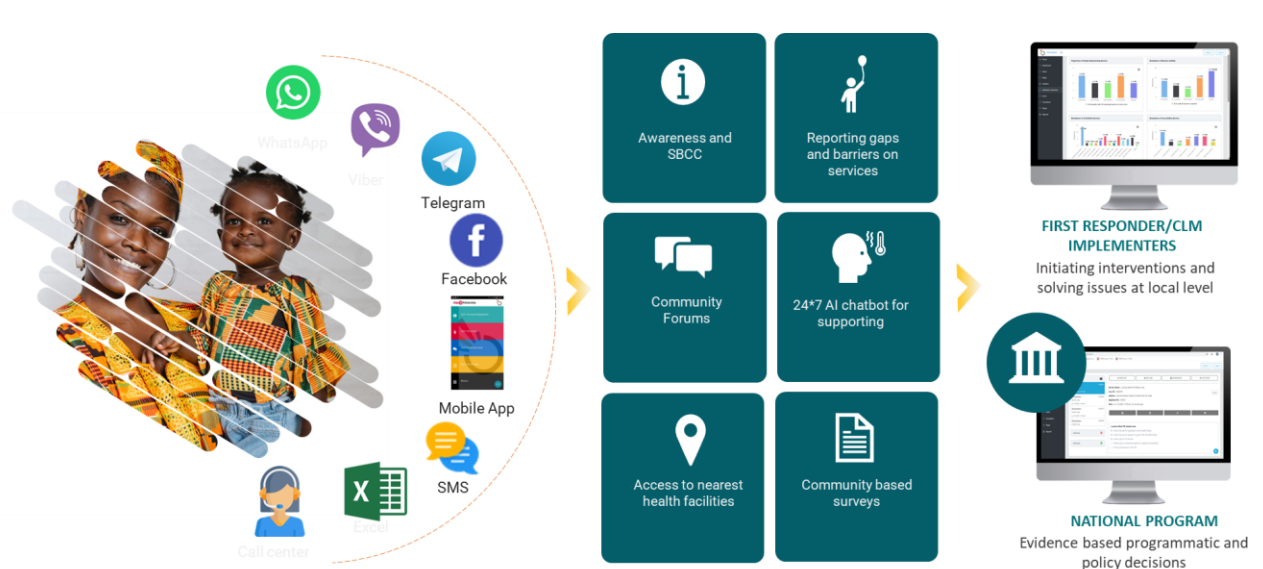

To support each of the implementation phases, Stop TB Partnership and Dure Technologies have developed materials and tools for countries to adapt and use.
